

OUR SERVICE

Our project management and installation are as important as the quality of the products we offer, and we are committed to effective quality management to ensure that quality workmanship is standard.

DESIGN

- Early involvement allows us to assist on planning and arrange site surveys
- Using bespoke software and CAD, plans and specifications are turned into construction drawings ready for approval, manufacture and installation
- Electronic data management systems are used to monitor architect and service updates which affect designs as the project proceeds
- Mood boards are created to help develop and visualise the design and 3D software is used to model all new designs
- Every element is prototyped and tested to make sure it's right when it gets to site

INSTALLATION

- All project managers are SMSTS trained, all supervisors a minimum of SSSTS and all managers have First Aid training
- Our installation team are all carpenters with NVQ Level 2 Carpentry & Joinery and all site operatives have manual handling training
- Project Execution Plans are drafted at tender stage to share key dates and ensure we install to programme schedules
- Site progress is continuously monitored making sure openings are accurate and material is called off in time
- We work with delivery booking systems and our lorries are Silver FORS registered, complete with fall arrest systems
- Warehouse facilities for 'just in time' delivery. This can be arranged where space is at a premium.
- Pictorial RAMS (Risk Assessment and Method Statements) and daily activity briefings keep our operatives informed and safe on site and we operate a no blame culture when reporting near misses to highlight potential hazards
- Records of tool inspections and electrical PAT testing are issued to the client if requested
- Our management team carry out regular site Health and Safety reports
- Fieldview is used for Q&A checks before inspection by the client's site team. On satisfactory inspection, units are protected to avoid damage. Fieldview is also used to carry out Health & Safety audits along with the efficient monitoring and clearing of any defects

CUSTOMER CARE

- On completion, a full Operation and Maintenance Manual provides information about the project, product and maintenance required
- Pantera are committed to providing the best product and service, to the client and the end user
- All products come with a standard 2-year warranty from completion of our works package
- Our customer care department will deal with product queries and will return to the property to correct any defect expeditiously
